(KS3-4) Water bill percentages

You can use a calculator

1. My average usage of water is 120 litres per day, I want to reduce to 100 litres, what percentage reduction is this? (Round to 2dp)
2. If my water cost £0.04 per litre, what will my reduced price then be per week?
3. Calculate a reduction of 8% off a water bill of £220.
4. If water was 5p per litre, due to diminishing water resources available, this year the price increased by 12% and then the next year by 10%. How much will a litre of water cost in 2 years, to 2dp?
